

Take a input-> as number and check whether the number is positive,negative or equal to zero.

In [3]:

```
num = int(input())
if num > 0:
    print("The given number {} is positive".format(num))
elif num < 0:
    print("The given number {} is negative".format(num))
else:
    print("The given number {} is equal to zero".format(num))
```

-2

The given number -2 is negative
